Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: Identification of a novel collagen chain represented by extensive interruptions
A; Reference number: PNO675; MUD:94059075; PMID:8240330
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ם
                                                                                                                                                                                                                                                                                      ESGIOI

collagen alpha 1(XVIII) chain precursor, long splice form - mouse

NyContains: collagen alpha 1(XVIII)

NyContains: collagen alpha I(XVIII)

C)Species: Mus musculus (house mouse)

C)Species: Mus musculus (house mouse)

C)Date: 03-0ct-1995 #sequence revision 08-May-1998 #text change 15-Sep-2003

Proc. Natl. Acad. Sci. U.S.A. 89:10144-10148 (1992).

-I TISSUE SPECIFICITY: Expressed predominantly in internal organs

such as advental gland, pancreas and kidney.

-I PTM: Prolines at the third position of the tripeptide repeating

unit (G-X-Y) are hydroxylated in some or all of the chains.

-I SIMILARITY: BELICOG TO THE FIRRIL-ASSOCIATED COLLAGENS WITH

INTERRUPTED HELICES (FACIT) FAMILY.

-I SIMILARITY: COLTAIN 1 TSP N-terminal (TSPN) domain.

-!- FUNCTION: Required for the synthesis of the hydromethylpyrimidine
-!- FUNCTION: Required for the synthesis of the hydroxymethylpyrimidine (4-amino-2-methyl-5-
hydroxymethylpyrimidine) (By similarity).
-!- PATHWAY: Thiamine biosynthesis.
-!- SIMILARITY: Belongs to the thiC family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     51; Gaps

--- DISEAS: Defects in SCAl are the cause of spinocerebellar ataxia type 1 (SCAl) [MIM:164400]; also known as olivopontocerebellar atrophy I (OPCA I). SCAl is an autosomal dominant neurodegenerative disorder characterized by progressive neuronal loss in the cerebellum, brain stem and spinocerebellar tracts. Clinical features are cerebellar ataxia, dysarthria, ophtalmoparesis, muscle wasting and neuropathy. Onset of the disease usually occurs in the third or fourth decade of life and death occurs ten to twenty years later.
--- MISCELLANEOUS: The self-association seems to be necessary to form nuclear aggregates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Interpro; IPR003652; Atax....

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mannironic acid.
--- PATHWAY: Alginate biosynthesis.
--- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
--- SIMILARITY: Belongs to the glycosyltransferase family 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -1- FUNCTION: Possibly a processive enzyme that polymerizes GDP-

"A elikaryotic alanine racemase gene involved in cyclic peptide
biosynthesis.";

"J. Biol. Chem. 275:4906-4911(2000).

-:-FUNCTION: Non-ribosomal peptide synthetase, able to activate
profine and ABO (2-amino-9,10-epoxia-8-oxodesanoic acid), and
primerize L.Pro. Catalyzes the production of HC-toxin: a cyclic
tetrapeptide. Activates and thioesterifies L-Pro, and epimerizes
it to D-FRO; also uses D-Ala as a substrate but this is epimerized
   filamentous fungus Cochliobolus carbonum is encoded by 15.7-kilobase open reading frame."; J. Biol. Chem. 267:26044-26049(1992).

- FUNCTION: Transcriptional regulator (By similarity).

- FUNCTION: Transcriptional regulator (By similarity).

- FUNCTION: BY PHA/PMA OR BY SERUM.

- INDUCTION: BY PHA/PMA OR BY SERUM.

- SIMILARITY: BELONGS TO THE EGR FAMILY OF C2H2-TYPE ZINC-FINGER

PROTEINS.

- SIMILARITY: Contains 3 C2H2-type zinc fingers.

- FINITARITY: Contains 3 C2H2-type zinc fingers.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
